

I'm writing to request that you maintain net neutrality and not allow Internet Service Providers to degrade the performance of internet services that I choose to use through the internet connection that they provide and I pay for. The internet is a great equalizer and empowers people to grow and learn. Consider the effect that a lack of net neutrality can have for people who take online education courses, or people living in rural areas where a single provider has a monopoly on the internet market there. My ISP should not be able to determine the speeds of the network services I need. ISPs have taken advantage of their own customers to the point that several have become the most reviled companies in the US. ISPs cannot be trusted to do anything other than abuse their power. The government should not allow ISPs to operate in an anti-competitive fashion and limit their power. Please support net neutrality.
